WHAT IS APHILION Q² - BALANCE ?

- A sub-fund of the SICAV Aphilion Q² (UCITS IV, registered in Belgium).
- A 'balanced' fund that invests in the same basket of equities as Aphilion Q² - Equities, but hedges a significant part of the equity market risk by using derivatives on equity market indices.
- The degree of hedging will vary in a range of 65% to 85%, depending on the market expectations of the fund managers. On average, 75% of the equity market risk will be hedged.
- The investment universe of Aphilion Q² - Equities consists of more than 4000 stocks worldwide; these more or less constitute the largest stocks in each market.
- The actual portfolio is very focused, and consists of ± 80 stocks, a geographically and sectorally well diversified selection from the investment universe. This ensures a more than adequate risk control, yet still allows the fund managers to monitor each position closely (news flow, trading opportunities, ...)
- The stock selection process is based on a set of in-house financial-econometric models and tools which use fundamental data (earnings, interest rates, etc.) to evaluate the return potential of our investment universe on a daily, real-time basis.
- The base model has a (partially in-sample) track record going back to 1990, with an average annual outperformance of +9,8%; Aphilion Q² - Equities' impressive performance since its launch on December 5th, 2001 is a logical extension of this.

Balance was only launched recently and so there is not a lot of price history to show. This graph nevertheless nicely illustrates what Balance is all about: a lower risk way of achieving a positive absolute return thanks to the outperformance of the underlying equity-portfolio.
